AB - J03199471 A synthetic-fibre(I) is treated with (A) a polyamino-acid and (B) a crosslinking agent on surface. The (I) synthetic-fibre is pref. nylon, polyester, acryl, vinylidene or mixt. with cellulose-, wool-fibre, etc. The (A) polyamino-acid is pref. anhydride of amino-N-carboxylic acid, e.g. gamma-methyl-L-glutamate, gamma-ethyl-glutamate, etc.; of which initiator is pref. ammonia, mono-methyl-amine, dimethyl-amine etc. of amt. of pref. 0.1-2 mol.% based on (A). The (B) crosslinking agent is pref. isocyanate-, epoxy-crosslinking agent, e.g. "Koroneito EH" (RTM) available from Nihon Poruretan KK, "Denakoru 301" (RTM) available from Nagase Kasei KK; of which amt. is pref. 0.1-10 wt.% of solid based on soln. (A).

- USE/ADVANTAGE - Synthetic-fibre or cloth made of it is given a feel and touch like natural protein-fibre, e.g., silk, and its durability against many washings, without deteriorating strength of the fibre.
